

Why choose GameSystem for your evacuation team

When your team compares cable rescue systems, the cable sizes supported, permitted rescuer load and setup requirements matter. GameSystem offers measurable advantages in those areas, with purpose-built access and evacuation equipment available through Pro Snow Line.

01 Fits larger lift cables

RSQ-GAMES accepts cable up to 65 mm, versus 58 mm for Cascade Hang/Cable Gliders and 60 mm for IMMOOS SS1 mGB and SS20 AWD.

03 Less diameter adjustment

RSQ-GAMES fits 30-65 mm cable without diameter adjustment. Cascade uses diameter-specific actuator links; IMMOOS SS1 mGB and SS20 AWD use pin settings.

05 Access through evacuation

Combine RSQ-GAMES and ROLL-GAMES cable access with EVER-GAMES passenger descent. Select equipment and passenger supports around the complete evacuation plan.

02 More rescuer load capacity

RSQ-GAMES permits 150 kg (331 lb) during travel: 20% more than the 125 kg (276 lb) published for IMMOOS SS1 mGB and SS20 AWD.

04 Braking with added control

RSQ-GAMES documents an over-pull anti-panic stop, dead-man braking and regulated speed. These are specific control features operators can evaluate.

06 Competitive device pricing

At July 2026 device-only prices, RSQ-GAMES was 4.6% below Cascade Hang Glider and 15.0% below Cable Glider. Ask PSL for current pricing.

See pages 3-4 for model comparisons, source references and the pricing basis.

Choose equipment for each stage

Match cable access and passenger descent equipment to your lift configuration and the needs of your evacuation team.

Optional cranks shown

CABLE ACCESS AND TRAVEL

RSQ-GAMES

Cable access device with regulated speed, bilateral opening and several braking functions.

Cable: 30-65 mm (1.2-2.6 in), without diameter adjustment.

Travel load: 150 kg (331 lb), rescuer plus equipment.

Options: hand cranks and drill adapter for propulsion.

PASSENGER DESCENT

EVER-GAMES

Automatic rescue descender with back-and-forth operation for passenger evacuation and rescuer self-evacuation.

Total descent load: 60-250 kg (132-551 lb).

Regulated speed: 0.5-2 m/s (1.6-6.6 ft/s).

Maximum descent height: 100 m (328 ft).

CHAIRLIFT CABLE TRAVEL

ROLL-GAMES / DBL

Single- and double-roller carriages for appropriate chairlift evacuation techniques.

Cable: 20-65 mm (0.8-2.6 in).

Mounting: one-hand insertion using a safety lever; connectors remain in their attachment positions.

Specify the complete system

Ask PSL to review equipment, rope lengths, passenger supports and accessories for your line. Use requires trained personnel, a site-specific evacuation plan and current manufacturer instructions. The complete system is limited by its lowest-rated component.

Where RSQ-GAMES has the edge

Compare cable-travel equipment for ropeway rescue. Published specifications reviewed September 21, 2026.

Selection factor	GameSystem RSQ-GAMES	Cascade Rescue Hang / Cable Glider	IMMOOS SS1 mGB / SS20 AWD
Maximum cable diameter	65 mm	58 mm	60 mm
Cable diameter setup	No diameter adjustment 30-65 mm range	Select the correct A, B or C actuator link for 32-58 mm	Select the correct diameter pin settings on both models
Load during travel	150 kg / 331 lb Rescuer + equipment	310 lb One person only	125 kg / 276 lb Both models
Published slope limit	Downhill travel to 45°	Hang: 45° Cable: 32°	105% grade; cable-specific conditions apply
Documented braking	Speed regulation; dead-man and anti-panic functions	Manual descent control; dead-man brake	Centrifugal speed limiter; hand and dead-man brakes
Propulsion options	Optional hand cranks and drill adapter	Gravity descent controlled by the operator	Accessory drives; SS20 AWD is designed for motorized uphill use

What the differences mean for your team

Larger-cable coverage. RSQ-GAMES reaches 65 mm, beyond the listed competitors' upper limits. This is useful where lift cables exceed 58 mm or 60 mm.

More capacity for the rescuer and equipment. Its moving-load allowance is 25 kg (55 lb), or 20%, above both listed IMMOOS carriages. It also exceeds Cascade's 310 lb travel limit.

One fewer setup variable across compatible lifts. The adjustment-free diameter fit removes the link or pin-setting choice required by these competing models. This is a setup difference, not a measured evacuation-time claim.

Selection context: IMMOOS supports smaller cables than RSQ-GAMES. Cascade Hang Glider is lighter. Cascade ranges and loads above follow its manual where product-page text differs. All ratings remain subject to the manufacturer's complete conditions of use.

Evacuation capability and value

Compare the rescue function and the complete configuration. GameSystem's advantages are specific to the equipment and task.

EVER-GAMES versus IMMOOS MRG 9-2P

Function	GameSystem EVER-GAMES	IMMOOS MRG 9-2P with lifting function
Automatic passenger descent	Automatic; back-and-forth operation	Automatic; centrifugal regulation
Maximum descent height	100 m / 328 ft	160 m / 525 ft
Maximum lifting height	20 m / 66 ft	12 m / 39 ft
Maximum lifting load	130 kg / 287 lb	140 kg / 309 lb

GameSystem advantage: EVER-GAMES provides 8 m (26 ft) more published lifting reach, within its 130 kg lifting limit. MRG offers greater descent height and a higher lifting-load limit. The MRG comparison uses the lifting model, SKU 176287.

RSQ-GAMES device price advantage

Device only	Reference price in USD	RSQ-GAMES difference
RSQ-GAMES	\$3,911.70	Comparison baseline
Cascade Hang Glider	\$4,100.00	\$188.30 less / 4.6% lower
Cascade Cable Glider	\$4,600.00	\$688.30 less / 15.0% lower

Price basis: July 15, 2026 battlecard, device-only figures. Cascade list prices also matched its retail pages on September 21, 2026. Reconfirm PSL pricing and comparable configurations; kits, rope, training, freight, tax and accessories are additional as applicable.

Compare the right categories. Cascade's Chair Lift Evacuator Seat is passenger support; its F3 kit is a personal descent kit. Neither replaces a cable carriage or an automatic passenger descender. Compare ROLL-GAMES with cable rollers, and EVER-GAMES with automatic descenders such as MRG.
